Introduction

Welcome to *Scared of the Dark!* A fun and simple game about finding the best path to victory. This section will introduce the story of the game to you, and explain what exactly your goal is as the player.

Background Story:

On a stormy night in a house all alone, there exists you – the player – on their way to reach the comfort of their bed. Suddenly *-click-* the power goes out, and you are engulfed into darkness. As your eyes adjust, you start to feel as though you are not alone. Could it just be your imagination? You are not here to wait and find out. You realise in this moment that the only way to truly be safe from what lurks in the dark is to find some light.

Somewhere in your house, there is a match. You must find it, then find your way towards the torchstick. However, how do you know that the path you will take won't lead to your madness?

Goal:

The goal of this game is very simple. You as the player appear on an 8x8 board along with a match, a stick, and a shadow monster which is out to get you. **Figure 1.1** is an example of what the board may look like:

	0	1	2	3	4	5	6	7	
<									>0
<									>1
<					1				>2
<									>3
<								!	>4
<				M					>5
<		C							>6
<									>7
d	0	1	2	3	4	5	6	7	

Figure 1.1: An example Game board with Character (C) , Shadow Monster (M) , Match (!) , and Stick (1).

You as the character are simply required to find the best path to the **Match**, and then the next best path to the **Stick**, which makes it so that the **Shadow Monster** does not catch you. If you are able to light the stick, you win. However, every time the Shadow Monster catches you, your **Fear Factor** goes up by 10. Each time that happens, the Monster gets placed randomly somewhere on the board. If your **Fear Factor** reaches 100, you lose as the **Shadow Monster** has won.

The Full Game (Detailed)

This section of the User Guide explains every step in order of **System Requirements**, **General Setup**, **Inventory and Button guide**, **Rules**, **How To Play**, and **How to Stop Playing**.

System Requirements:

To play this game, you are required to have a computer device (e.g. Laptop, Desktop PC) which includes a mouse and a keyboard. This computer device must have access to the internet as well as have a web browsing app installed (e.g. Chrome, Firefox).

General Setup:

Let's start by making sure you have everything you need to get your game up and running.

First, we need to find where exactly you have your download of the game file, “game.s”. You will need this to get the game up and running, follow the steps below to do this:

Start by finding exactly where you downloaded the game.s file on your computer device. This is usually located in the “Downloads” section of your computer device:

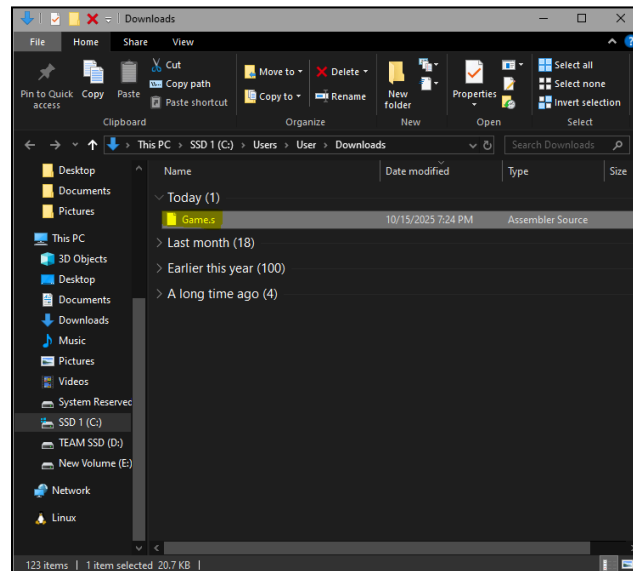

Figure 2.1: A snapshot of a windows 10 computer device's file explorer

Once you find this as show in *Figure 2.1*, click on the section which shows the path to your file. Copy this path and keep it handy for later as you will need it (it is recommended to paste this path on a note).

Next, open your choice of a browsing software on your computer device.

Copy the following link and paste it into the search bar:

<https://cpulator.01xz.net/?sys=rv32-spim>

Here is what you should see:

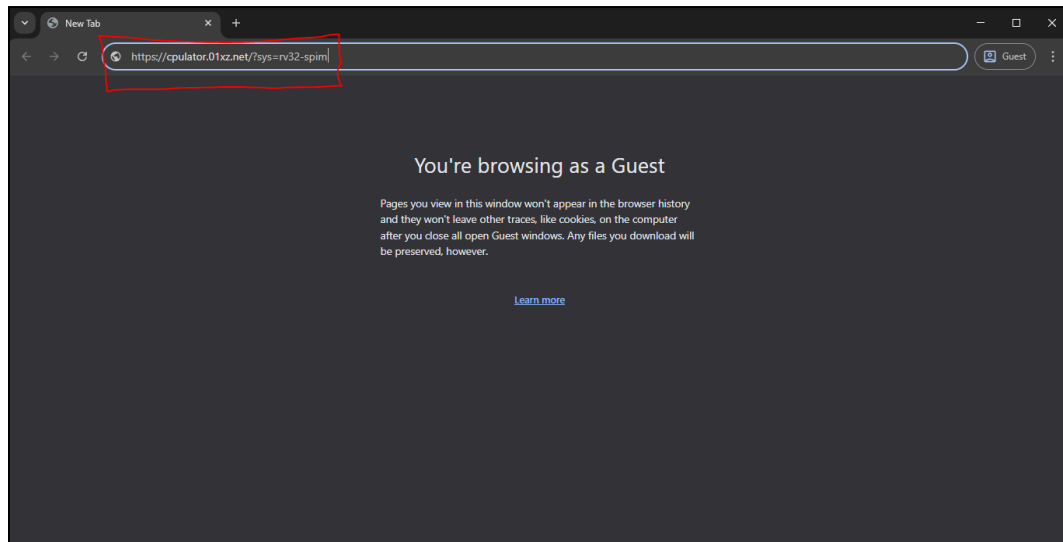

Figure 2.2: Browser with link pasted in search bar

Once this is done, Find the enter button on your keyboard and press it. This will lead you to the website which you will use to run your game. Below is what you should be currently looking at:

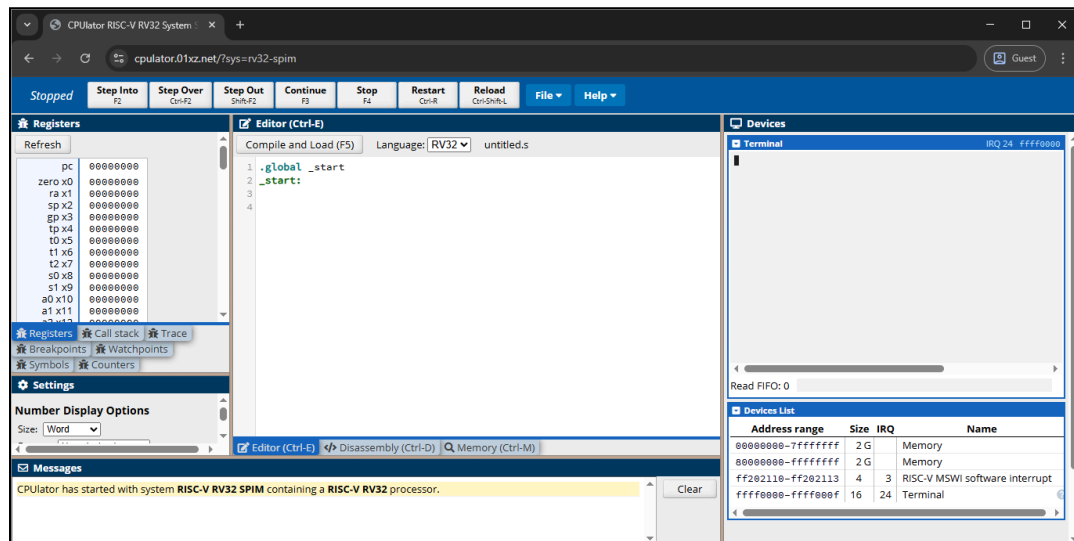

Figure 2.3: Main CPULator Screen on RISC-V RV32 SPIM

Now that you are at this screen, find the previous copy you made of the path to your game file and copy it again(or remember where you put the game.s file). You will then follow these buttons on the screen: Click File, then click open:

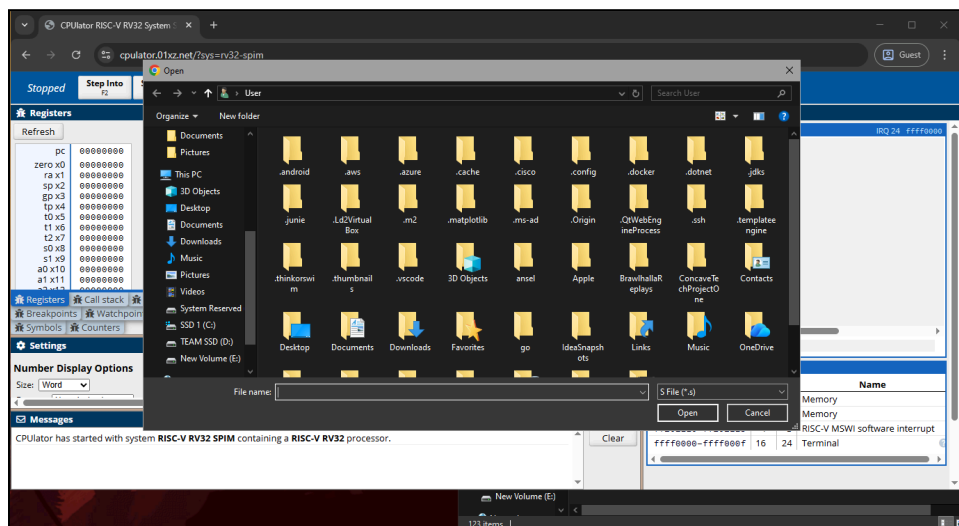

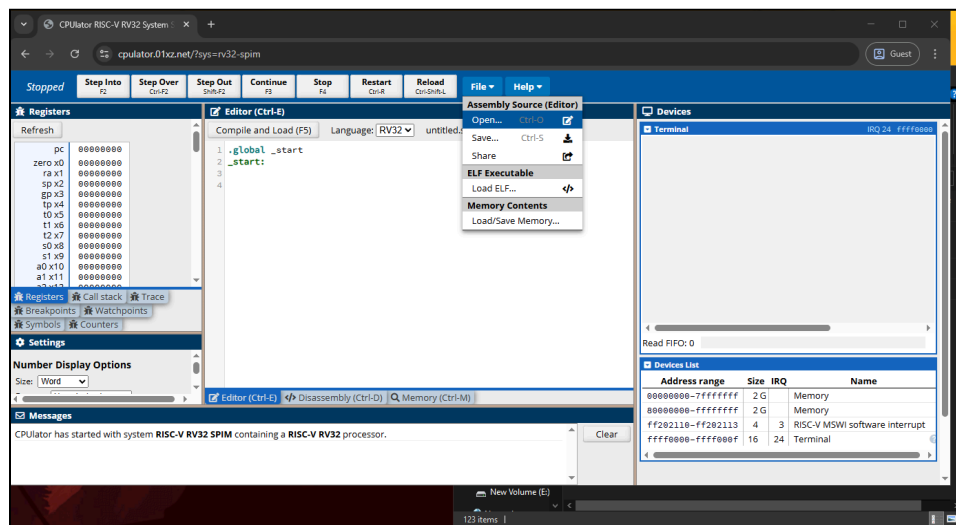

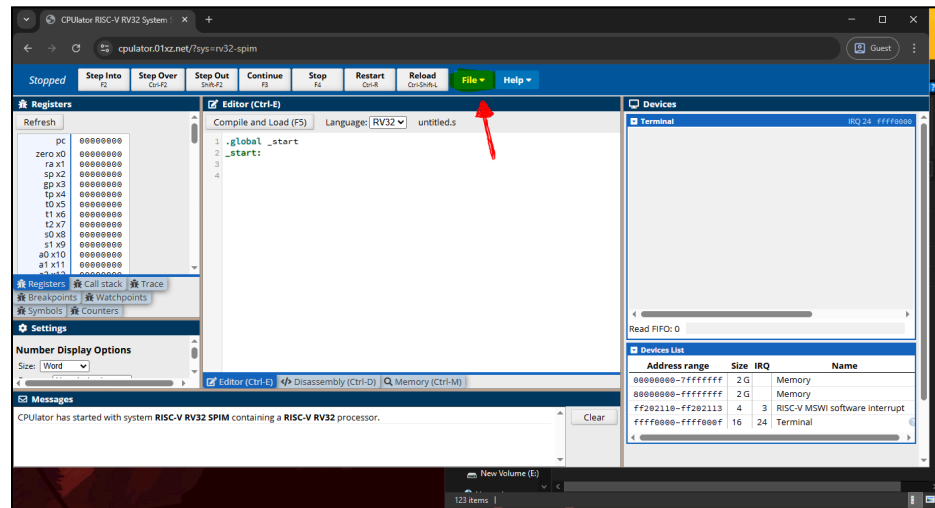

Figure 2.4-2.5-2.6: each step to open your file explorer

Once this is done, either paste your copy of your path to the game.s file or go and locate it, once you find it (Figure 2.7) double click the file to open the code. Your screen should, after this, look like Figure 2.8-2.9:

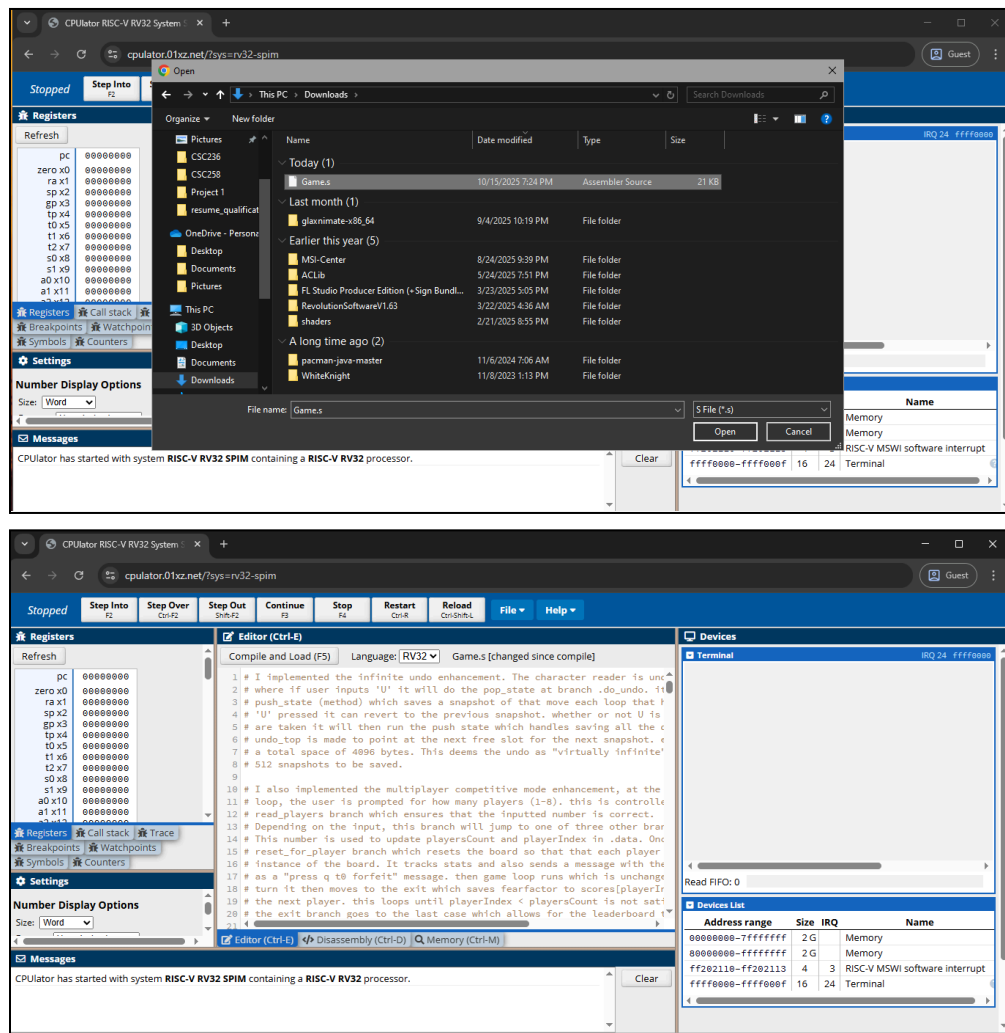

Figure 2.8-2.9: Opening the file and CPULator after opening the game file
Congratulations! The game has been uploaded to the website and is ready to be played!

How To Play:

Now that you know everything you will need to know about how to actually play the game itself, you are ready to learn about how to actually start the game in your application!

After finishing the **General Setup** section, there are only a few steps required to “Press Play”. Follow everything that you see closely:

To start, find the “Compile and Load” button on your screen. You can either drag your mouse and press it directly or use the F5 key on your keyboard:

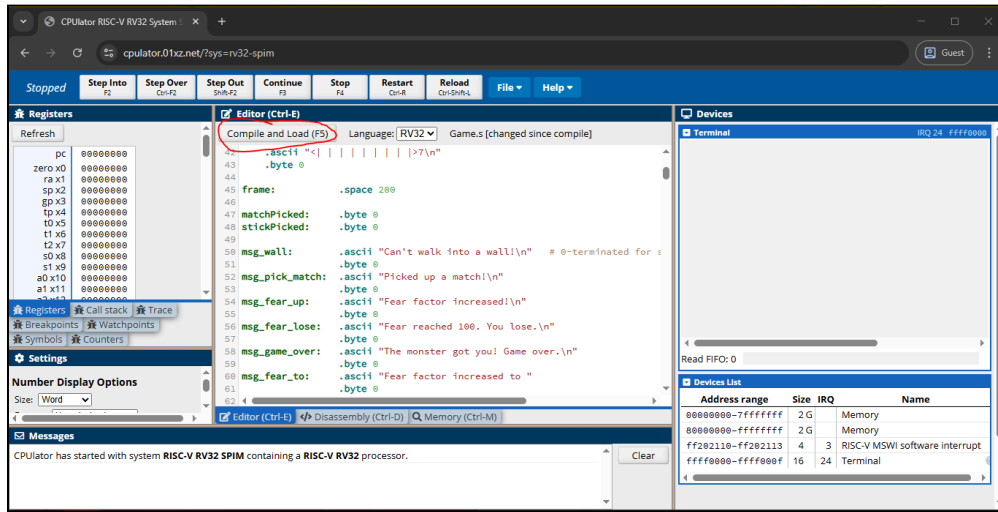

Figure 5.1: Compile and Load button location

Once you find this button as shown in Figure 5.1, click it once. Then, at the top of the website you will find the “Continue” button. Either drag your mouse and click it or press F3 on your keyboard.

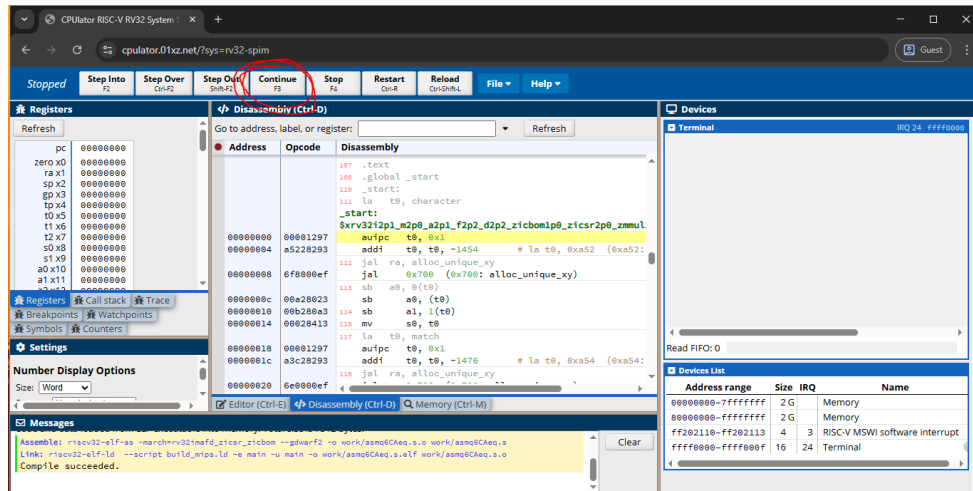

Figure 5.2: Location for the Continue button

As Figure 5.2 shows, your website might have changed a little bit when you pressed the “Compile and Load” button from the previous step. This is a good sign! As Figure 5.2 shows on the bottom left corner, underneath messages it should show “Compile Succeeded”. If it does, press continue and go to the next step below! If not, consult the previous steps to ensure you have followed the correct steps till this point.

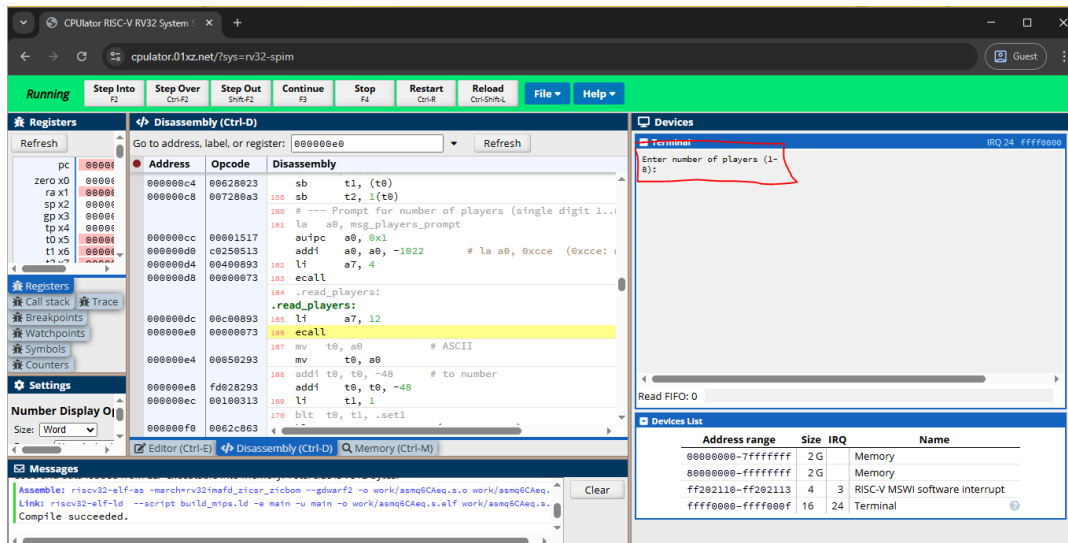

Figure 5.3: Website after hitting the “Continue” button

Figure 5.3 shows exactly what you should see up to this point. You might have noticed that a message popped up on the side asking you to enter a number of players. Before doing this, there is one more thing you should do and that is to make that box with the message bigger. Simply click and hold the grey bar on the left of the box, shown in Figure 5.4, and drag it out to make the “Terminal” window bigger. See Figure 5.4 below:

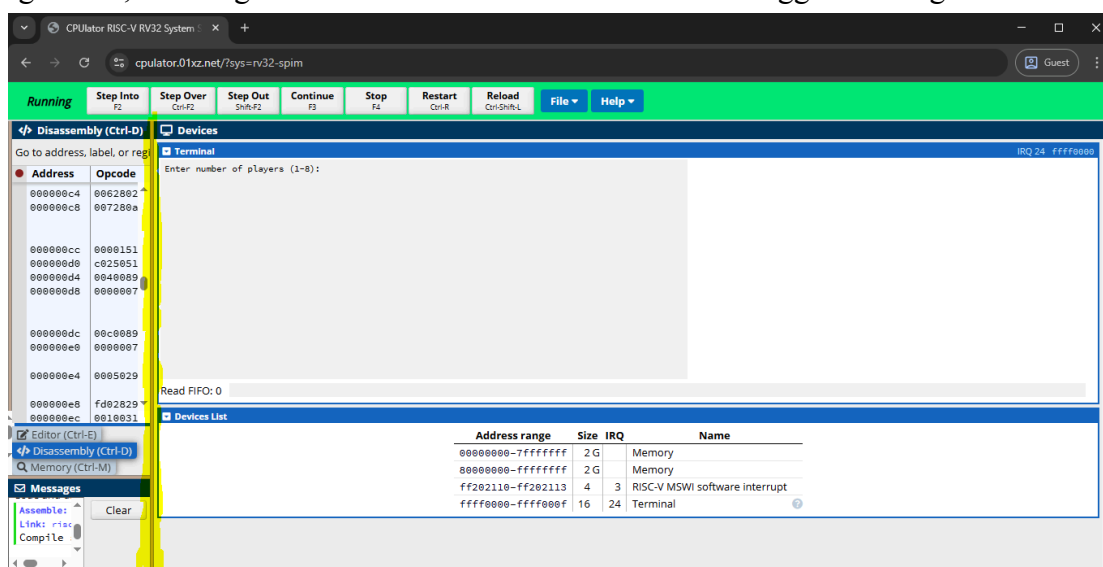

Figure 5.4: Terminal window after dragging bar highlighted in yellow out

Now that you are at this point, simply drag your mouse to the terminal and click anywhere inside the grey box (shown in Figure 5.5). Once you see the small indicator showing where you will type, let go of your mouse as you will not need it until you want to stop playing.

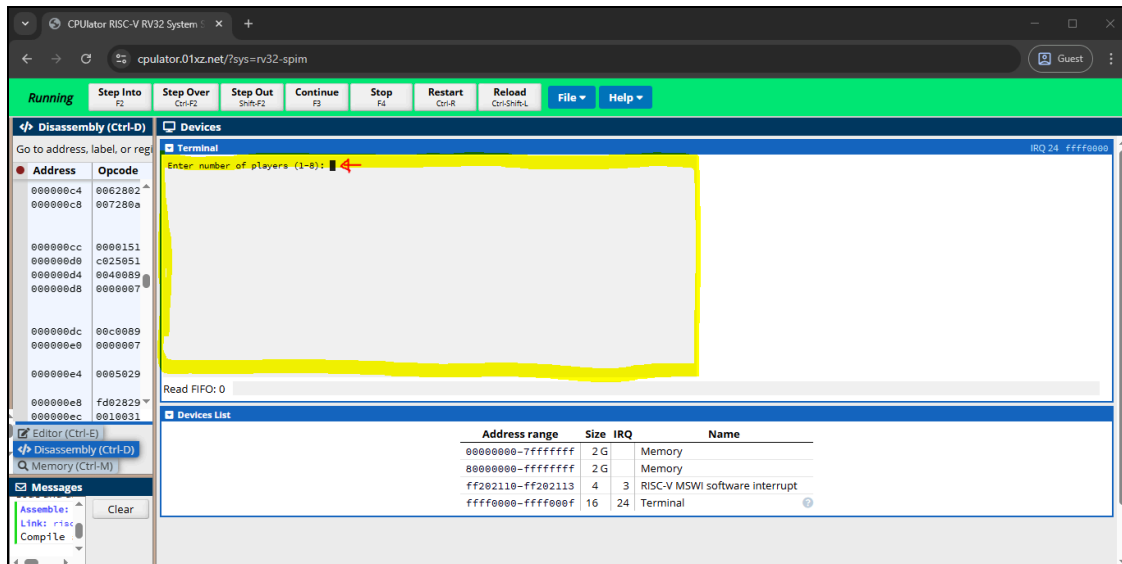

Figure 5.5: Highlighted section for the area which you must click to begin typing

Once you click in the area in Figure 5.5, simply input the number of players you are playing with. As in, if you are playing alone, click “1” on your keyboard, if more, type up to a maximum of the number “8”. Once you do that, a game board will appear, the game has begun! Use what you learned in the button guide and try to light the stick while keeping your fear factor as low as possible!

Inventory and Button Guide:

Now that the game has been uploaded we can start by explaining what buttons on your keyboard you will need to play this game, as well as what each set of buttons does. Then, we will move on to the items you as the player will need to focus on and how they are marked on the board.

Button Guide:

Let's start off with your movement characters. This game is a standard WASD game. That means that each direction is marked by the W, A, S, and D letter keys on your keyboard.

- **W** will allow you to move your character **one space up** the board.
- **A** will allow you to move **one space to the left** on the board
- **S** will allow you to move **one space down** on the board
- **D** will allow you to move **one space to the right** on the board.

And that is all you will need to master movement for **Scared of the Dark!**

The next two buttons that you will need for this game are Q and U.

→ **Q** will allow you as the player to **quit** the game or “forfeit”. This will simply end either that turn or end the game if it's the last or only player's turn. If you end the game, you will see the leaderboard print of everyone's scores.

(NOTE: *Players who forfeit will show up on the leaderboard with whatever their fear factor was before quitting, always make sure to remember your player number so you can know who the real winner is!*).

→ **U** will allow you as the player to **undo** a previous move you made.

And that's it! Those are all the buttons you will need to play this game.

Inventory:

To play this game, as mentioned before there are a total of **4 items** you will need to worry about. The first being your **Character**, which is marked by the **capital letter “C”** on the board. The next is the **Shadow Monster**, which is marked by the **capital letter “M”** on the board. The third and fourth items are the **Match**, marked with the **exclamation mark “!”** and finally the **Stick**, marked with the **number one symbol “1”**. This is all shown on the board shown on Figure 3.1:

	0	1	2	3	4	5	6	7	
<			C				M		>0
<					!				>1
<									>2
<									>3
<				1					>4
<									>5
<									>6
<									>7

Figure 3.1: Example Game Board with all inventory items shown

And that's it! That's everything you need as far as inventory and button guide for playing **Scared of the Dark**.

Rules:

This section will cover the rules of the game.

When it comes to **Scared of the Dark**, the rules are very simple. The main things you will have to worry about are as follows:

1. You cannot walk off the 8x8 space of the board: this will return the message “Can’t walk into a wall”
2. You cannot light the stick without the match: this is quite obvious.
3. Each player playing must finish their turn before handing they keyboard to the next player.

4. This game only allows a maximum of 8 players, with a minimum of 1 player

There isn't really much else to it! That concludes this section on the rules of **Scared of the Dark**.

How To Stop Playing:

This section describes what to do when you are done playing **Scared of the Dark**.

To stop playing, simply exit the page by closing the tab. Whenever you would like to play again, refer to the steps in **How to Play** for help. You can see the location of the tab closing button below on Figure 6.1:

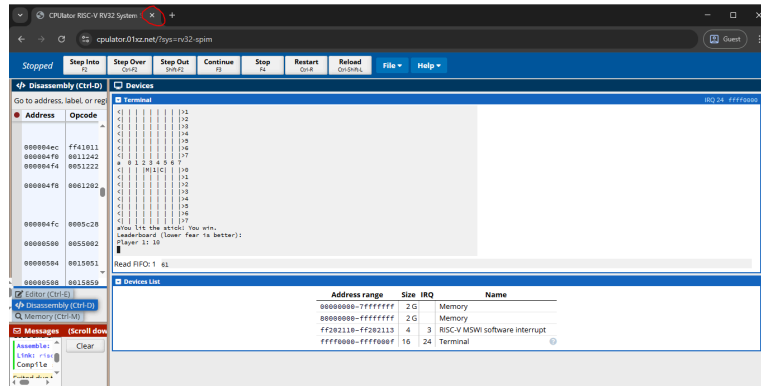

Figure 6.1: button to close tab marked with a red circle

Conclusion

You have reached the end of *User Guide: Scared of the Dark*. We hope that this guide gave you all the necessary information on what this game is and everything you need to play and stop playing the game. Have a fun time running from the Shadow Monster, glorious player. And, always remember, **keep that Fear Count low, and that confidence high!**
